

STAINLESS STEEL SPILLWAY CLEANING INSTRUCTIONS

Atlantic Spillways will not corrode when used in fresh water, however periodic cleaning may be required depending on water conditions. Brushed stainless steel finishes can be cleaned using 3M stainless steel cleaner (available at any home center) and a soft cloth. Copper Finished Spillways can be cleaned with any non-abrasive cleaner and a soft cloth. 316 Spillways used in swimming pool installations should be rinsed regularly with fresh water to remove accumulated chlorine deposits. See Attention section in the product manual for more details.

DIRECTIONS:

For Brushed 304 & 316 Stainless Steel Spillways: Use 3M Stainless Steel Cleaner, available at your local hardware store, and the included scouring pad or a Scotch Brite pad.

When using the scouring pad or Scotch Brite pad, follow the grain of the stainless steel. DO NOT CLEAN AGAINST THE GRAIN.

For Copper Finish Spillways: Use a non-abrasive cleaner and a soft cloth.
